

Gambusia Fish

the water warriors

Gambusia fish

Gambusia holbrooki

Gambusia Fish, or Mosquito Fish, are small fish native to Florida. These fish are excellent at eating mosquito larvae, along with any other living things small enough to fit in their mouths. One adult fish can eat up to 100 mosquito larvae a day.

Definitely durable

These fish can be a great tool for controlling mosquito populations because they can live in poor quality stagnant water and withstand a wide range of temperatures.

Good homes for fishy friends

When you are trying to find a place to put Gambusia Fish there are 3 things you should consider:

- Can this water breed mosquitoes?
- Is it impossible to DUMP, DRAIN, or COVER this water?
- Are mosquito larvae predators missing from the water?

If the answer to all of these questions is YES, then you may have found a good place for your Gambusia Fish.

How do I get some fish?

Here at the Anastasia Mosquito Control District we breed our own Gambusia Fish. If you would like some fish you can:

- Call us.
- Put in a service request online or through our phone app
- Stop by during our hours of operation and pick them up.
